

Tried and tested for 20 years

Quality testing is a matter of trust, and Motorscan S.p.A. from Parma, Italy has proven worthy of this trust time and again. The ISO-certified enterprise offers a wide range of test and diagnostic equipment for automotive applications and has set new standards yet again with its new products, Tank 5880, EuroSmoke 9001, Zerolight Evolution 6000XL and TotalClima 2200DIAG.

Certified to ISO 9001 for 14 years already and – more recently - to ISO 14001 and OHSAS 18001, Motorscan S.p.A. offers a whole variety of reliable test instruments. Gas analysers, smoke meters, electronic diagnostic devices, battery testers, A/C service systems, test lanes and dynamometers are designed and manufactured at the modern works in Parma. Motorscan employs 50 skilled and motivated specialists who support its customer-oriented business approach. “A dedicated workforce is one of the key factors of success,” says Managing Director Lucia Valcavi, who will be celebrating her 20th anniversary with the company itself on 3rd January, 2011. “Along with quality, innovation and service, it is the support of our employees which helps us to create customer relations built on mutual trust.” Always prepared to respond to upcoming diagnostic needs, Motorscan continues to innovate the market. Applications are above all in the automotive sector, but also in related areas such as the motorcycle branch and the bus and coach industry. Recent developments include the

Tank 5880 multi-brand diagnostic tool with colour touch screen, the EuroSmoke 9001 for diesel emission measurement complete with remote control, 24-colour printer and integrated software in compliance with all relevant international regulations, and the universal Zerolight Evolution 6000XL designed to reset the onboard pilot lights. Featuring new hardware and technology in combination with the well-proven performance and reliability of Motorscan’s Zerolight 6000, the new device may indeed be termed the “natural evolution” of the forerunner model. Last, but not least, TotalClima 2200DIAG is a unique system that not

only analyses the function of modern A/C systems, but also offers the possibility to connect a refill station to the car plug and interact with all A/C ECU: faults, faults elimination, functioning parameters, reading, adjustments, coding, ID-reading and actuators.

The quality and reliability of Motorscan analysis instruments is undisputed. Foreign sales accounting for more than 50% of all business confirm the company’s excellent international acceptance, just like the response at major trade fairs in Frankfurt, Bologna and Paris. In order to guarantee the same high service level in Italy and abroad, Motorscan operates a free hotline in Italy and cooperates with qualified distribution partners on an international level. The cooperation with larger partners is another aspect of Motorscan’s growth strategy and will contribute to future expansion both in terms of products and business.
